(Michael D. Zwank, Doody's Book Reviews, December 21, 2019) Buchrückseite This book presents evidence-based criteria to systematically assess the appropriate use of medical imaging in the emergency department and other acute care settings. –<Over the last decade, there have been profound changes in the diagnostic testing and work-up of patients presenting to the emergency department with emergent symptoms. One of the most far-reaching changes has been the increased availability, speed, and accuracy of imaging due, in part, to technical improvements in imaging modalities such as CT, MR, and PET. Although the use of high-end imaging has plateaued in general, increased utilization continues in the ED. These patients are more acutely ill and there is additional pressure to make an accurate diagnosis as quickly as possible to facilitate prompt disposition or treatment. There is also strong evidence for the beneficial use of imaging in the emergency setting that results in improved patient outcomes. This book answers that need by providing protocols and guidelines for neuroradiological, cardiothoracic, abdominal and pelvic, musculoskeletal, and pediatric imaging are reviewed in terms of the available imaging modalities, diagnostic criteria, and treatment options. Distinguished by its unique focus on evidence-based emergency imaging in adults, children, and special populations, this book is a unique resource for radiologists, emergency medicine physicians, and physicians in other specialties who need to be informed about the most appropriate uses of diagnostic imaging in the emergency care setting. – Alle Produktbeschreibungen". optimizing diagnostic imaging in the emergency department. evidence based imaging optimizing imaging in patient care. evidence based imaging in pediatrics optimizing imaging. how to reduce diagnostic imaging in emergency colleague. evidence based medical imaging ebmi sciencedirect. evidence on medical imaging cadth ca. optimization of diagnostic imaging use in patients with. optimizing diagnostic imaging in the emergency department. optimizing diagnostic imaging in the emergency department. emergency radiology series evidence based imaging in. evidence based emergency imaging optimizing diagnostic. optimizing diagnostic imaging in the emergency department. evidence based emergency imaging optimizing diagnostic. diagnostic imaging for the emergency physician sciencedirect. evidence based imaging springerlink. evidence based medicine meets diagnostic radiology. cholescintigraphy. center for evidence based imaging cebi. diagnostic imaging for the emergency physician. optimize appropriate ct imaging in the emergency. evidence based emergency care diagnostic testing and. evidence based emergency imaging optimizing diagnostic. evidence based imaging optimizing imaging in patient care. optimization of diagnostic imaging use in patients with. department of radiology our appropriate use criteria. optimization of diagnostic imaging use in patients with. evidence based emergency imaging optimizing diagnostic. evidence based emergency imaging optimizing diagnostic. evidence based imaging optimizing imaging in patient care. how to streamline radiology workflow diagnostic imaging. evidence based imaging optimizing imaging in patient. evidence based emergency imaging springerlink. advanced imaging aim specialty health. explore the products philips. evidence based imaging evidence based emergency imaging. publications center for evidence based imaging cebi. a systematic review and meta analysis of diagnostic. optimizing diagnostic testing for venous thromboembolism. clinical examination diagnostic imaging and testing of. all products philips. diagnostic imaging for the emergency physician 1st edition. evidence based emergency imaging optimizing diagnostic. evidence based emergency imaging optimizing diagnostic. evidence based imaging improving the quality of imaging. uw emergency radiology review radiology cmeinfo. advanced imaging aim specialty health. evidence based emergency imaging optimizing diagnostic. evidence based imaging optimizing imaging in patient care. evidence based imaging optimizing imaging in patient
