

R Buckminster Fuller Pattern Thinking By Daniel Lã Pez Pã Rez

"Reseña del editor 'Pattern-Thinking' reassesses the work of Buckminster Fuller - unique hybrid between theoretician, architect, designer, educator, inventor, and author - as advancing contemporary models of design-research, practice, and pedagogy. Drawing extensively on Fuller's archive, the book follows his unique process of translation between the physical and conceptual dimensions of design, to redefine our understanding of the relationships between geometry, structure, language, and intellectual property. Rather than being organised around a chronology of distinct narratives, 'Pattern-Thinking' follows these parallel explorations as the basis for Fuller's artifacts and inventions. In the space between lines, models, words, and patents, it traces his ambition to measure physical experience in an ever-expanding pattern of relationships, while coordinating these into a conceptual network of words and concepts that shape the basis for his thinking. Advocating a multidisciplinary and political perspective, Fuller's transversal logic expands the knowledge base of contemporary models of design, which seek to find broader participation and to address new publics. Biografía del autor DANIEL LÃ"PEZ-PÃ&REZ, who has a PhD in the history and theory of architecture from Princeton, is an Associate Professor and a founding faculty member of the Architecture Program at the University of San Diego.".
